

# Maintenance Instructions

## Duratap

1/1

Advance Entrance Carpet Systems are designed to trap and hold dirt, grit and moisture and prevent it from entering your facility. If allowed to build up for long periods of time this will restrict pile movement and reduce effectiveness.

In order to safeguard the effectiveness of your Duratap coir fibre entrance carpet and to extend its life, we recommend cleaning your coir mats on a regular basis. This maybe daily in high traffic locations.

### Routine Cleaning

- Vacuum the dry dirt on your coir fibre entrance carpet preferably with a professional vacuum cleaner with a driven, rotating brush.
- Allow wet areas to dry out fully and then treat as dry dirt.

By vacuuming your coir entrance carpet regularly the dirt is loosened effectively and removed. Your coir mat will have a fresh, clean look and will retain it's effectiveness.

The dirt can be beaten out of loose laid coir fibre mats outside.

We advise against cleaning your coir mat with any wet carpet cleaning system. Excessive moisture will stain a natural coir mat.
